

5 CARD DRAW

Test your skill at poker with Five Card Draw, the most attractive video card game on the market. Housed in our furniture grade cabinet, and featuring our custom graphics, this unit is sure to get plenty of attention at your location. You can win on any hand of Jacks or better, with the odds being predetermined by the operator. Once a player has achieved a hand of Jacks or better, the player is given the choice of taking the credits or using the "Win Credits" to double or nothing on one single card. Should the player choose to play "Hi-Lo" a single card will appear on the screen face down. The player must now decide if this card is Hi (9 through Ace) or Lo (2 through 7) (8 is House Card and causes all bet credits to be lost). In the event the player chooses the correct Hi-Lo situation his "Win Credits" will be doubled and automatically added to the remaining credits in the upper left corner of the video screen. If the player choice is incorrect all "Win Credits" are erased. A player may continue to play 5 Card Draw until all coin credits and Win Credits are played.

5 Card Draw Features
